LETTER OF SUBMITTAL

THE COMMONWEALTH OF MASSACHUSETTS,
OFFICE OF THE SECRETARY,
DIVISION OF VITAL STATISTICS,

Boston, April 12, 1945.

To the Honorable Senate and House of Representatives:

I have the honor to submit herewith, as required by Chapter 46, section 21, and Chapter 208, section 47, of the General Laws, the one hundredth and third annual report on statistics of births, marriages, divorces and deaths in Massachusetts, for the calendar year 1944. Deaths are reported monthly while births, marriages, and statistics of divorce are not required to be reported until March, April and May of the year following that in which the events occur.

The editorial review and the method of presentation of the statistical data were prepared by Arthur J. Hassett, State Registrar, in charge of the Division of Vital Statistics. The statistical tables were prepared under the direction of Elizabeth M. Canty, statistician of the division. The exhibition of tabular results is restricted to such as are plainly of practical utility within the meaning of the statute by authority of which the tables are prepared.

Respectfully submitted,

FREDERIC W. COOK,
Secretary of the Commonwealth.

Editorial Review of the Vital Statistics of Massachusetts, 1944

INTRODUCTION

History.

Death Registration. — Massachusetts was one of the first colonies to recognize the importance of the registration of vital statistics, and as early as 1639 required registration of births, marriages and deaths; in 1840 statutes required copies to be filed with the Secretary of the Commonwealth. In 1880 the registration area for deaths recognized by the United States Bureau of the Census, i.e., the States, and cities in other States, effectively enforcing satisfactory registration laws of all deaths registered, included but two States, Massachusetts and New Jersey, the District of Columbia, and a number of cities in non-registration States.

During the period 1841 to 1944 inclusive, 4,063,859 copies of deaths have been received, filed, and tabulated in the Division of Vital Statistics. The original records are on file in the cities and towns in which the events occurred and copies in the city and town given as the residence of the deceased at the time of death.

Purpose. — Death registration often gives the first intimation of pestilential disease, permitting health officers to attack epidemics in their incipency. It serves as evidence in the inheritance of property and in the settlement of life insurance. It is useful in preventing crime through the restriction placed upon the disposal of dead human bodies, and insures a permanent and uniform record of the death of each individual for all purposes.

The Annual Report for 1943 was delayed through printing difficulties. The copy was prepared and furnished the printer in ample time to have the edition out several months earlier than it appeared.

Importance of Death Records. — Where proof concerning death is needed:

1. To prove the fact of death: For life-insurance claims; for liquidation of estates.
2. To prove facts about the deceased: For tracing ancestry; for names of husband or wife, and parents; for information on circumstances and cause of death; for age, sex, and race; for recording date and place of interment.
3. To prove date of death: For settlement of pensions; for insurance adjustments; for general legal use.

Mortality Statistics. — Mortality statistics, or statistics of deaths, are useful in showing the extent and rate of change in population produced by deaths; the average duration of life, the relative frequency with which the several causes produce death, and for their service in creating an interest in public health administration and securing support for sanitary measures. In comparison with birth statistics they give useful information regarding population increase or decrease. Mortality statistics, however, cannot be used as an index of the prevalence of certain diseases, because there is no fixed ratio between sickness and fatality. Only cases of fatal sickness or disease are given, while morbidity statistics include all cases, whether fatal or not.

Source of Data. — Mortality statistics are based upon original data obtained by the registration of deaths, which is accomplished by the filing of a standard death certificate.

The responsibility for seeing that a certificate is properly made out and filed rests with the undertaker, who is required by law to present a satisfactory certificate of death before he may obtain a permit to remove or bury a body. The local boards of health are required to transmit the death certificates to the city or town clerks who in turn record the deaths and are required to transmit certified copies to the Secretary of the Commonwealth on or before the tenth day of the month following that in which the deaths occurred. Hospitals and other institutions are required to obtain, when persons are received, the facts which are required for record in the event of the deaths of such persons.

Occupations. — As great interest is still being shown in the study of occupations in connection with cause of death due to the fact that many industries have adapted newer types of machines that give employment to large numbers and may have increased occupational risks, Table 18 will be continued. This table has been prepared from the list of occupations published by the Bureau of the Census showing the number of those gainfully employed who died from important causes.

Death Rates and Their Comparability. — The death rates given in this report are based upon the comparison of total deaths with the aggregate population. They are usually expressed in terms of the number of deaths per 1,000 population, and are calculated by dividing the total number of deaths by the population in thousands. This means that death rates vary with the character of the population and each element has its relation to the rate of mortality, and therefore, for comparison with other States or countries, the make-up of the population must be considered. The death rate per 1,000 males is generally higher than the rate per 1,000 females. Hence, a State having a relatively larger female population than another will normally show a lower death rate and a community where the very young or old predominate will show a higher rate than a community made up largely of young adults. Rates will also vary with the color and nationality of the inhabitants.

Factors which seriously affect the comparability of the death rates of different communities are: (1) race composition; (2) the social, marital, and economic status of the people; (3) employment; (4) migration; and (5) the birth rate.

Allocation. — Deaths are charged to the place of event and also are allocated to the place of residence of the deceased. This insures as near a true rate as possible and has a marked effect on municipalities which are large hospital centers. The usual place of residence has been used as a basis for all deaths occurring outside the State as well as for those in the State. Except for purposes of allocation former residents of Massachusetts who have died in other States, after an absence

from Massachusetts of more than one year, are considered as non-residents. Residents of other States who have resided in Massachusetts for more than one year are considered as residents. In the case of institutions and jails deaths have been allocated to the place of residence before entrance. Such persons are regarded as temporary residents of these places since they did not voluntarily enter with the intention of remaining and without doubt would have returned, if discharged, to their usual residence. Accidental deaths have been treated in the same manner as those caused by sickness. Also, beginning with 1942 those deaths due to violence have been allocated to the place of occurrence (see Table 17a, page 163). The foregoing outline does not by any means cover all cases that may and will arise but will serve as an explanation of the method used in preparation of allocated tables.

Number of Deaths and Death Rates. — There was a decrease in the mortality of 1944 as compared with that of 1943, the number of deaths occurring in the State during the calendar year 1944 being 51,870, a decrease as compared with 1943, of 3,070. Based on the estimated population of July 1, 1944, of 4,345,233, these deaths correspond to a rate of 11.9 per 1,000 population. The rate for 1943 was 12.7. Deaths of residents of Massachusetts numbered 51,454 in 1944, resulting in a death rate of 11.8 per 1,000 inhabitants.

During the ten-year periods, from 1925 to 1934, inclusive, the average death rate of the Commonwealth was 12.0 and 1935 to 1944, inclusive, 11.7.

Sex. — Of the 51,870 deaths in 1944, 27,237, or 52.5 per cent, were males, the percentage in 1943 being 52.1. The proportion of males in the living population, as shown by the United States Census of 1940, was 48.7 per cent. Expressed as a ratio there were 1,108 deaths of males per 1,000 deaths of females in 1944, as compared with 1,091 in 1943, 1,116 in 1942 and 1,106 in 1941. Of the 51,454 residents of the State who died in 1944, 27,046, or 52.6 per cent, were males.

Table 5 on page 30, shows that the death rate of males has been consistently greater than the death rate for females. The death rate of the sexes has fluctuated considerably, reaching the maximum in 1918, when the difference was 3 per 1,000.

Age. — Of the 51,454 deaths in 1944 of residents of the State, 2,582, or 5 per cent were of infants under 1 year of age. The rates for infant deaths in previous years were 5.4 per cent in 1943 and an average of 5 per cent for the five years from 1939 to 1943, 5.6 for the five years from 1934 to 1938 and 7.9 for the five years from 1929 to 1933. A more detailed discussion of infant mortality may be found on pages 4 and 5.

Sex and Age. — The death rate of adult males might be expected to exceed the rate of adult females, because of the more dangerous occupations of the males, but the excess in the death rate of male infants as compared with female infants has never been satisfactorily explained. Of the 2,582 decedents under 1 year of age in 1944, 1,453, or 56.3 per cent, were males. The ratio of male to female deaths among the higher age periods fluctuated somewhat. The proportion of male deaths was the larger from 1 year of age up to and including the age period 70 to 74 years. From the age of 75 years and upward the number of deaths of females exceeded the deaths of males including the reputed centenarians, numbering 36, of whom 14 were males and 22 were females. The excess of females in the population 65 years of age and over is so great that even though their mortality at each age period is below that of males, the absolute number of deaths is greater. The ratios of male deaths per 1,000 deaths of females at the various age periods in the four years 1941-1944 are shown in Table 8, on page 31.

Among the 27,046 male decedents in 1944, 1,453 or 5.4 per cent, were under 1 year of age; among the 24,408 female decedents 1,129 or 4.6 per cent, were under 1 year; and among the decedents of both sexes 5 per cent were under 1 year (see Table 9, page 32).

Marital Condition. — Not quite one-half (46.1 per cent) of the decedents 15 years of age and over, whose marital condition was reported in 1944 were married, 17.6 per cent were single, 34.4 per cent were widowed, 1.8 per cent were divorced, and .1 per cent were unknown. Among the male decedents 56.3 per cent were married, 17.5 per cent were single, 23.9 per cent were widowed, 2.1 per cent were divorced and .2 per cent were unknown. Among the female decedents 34.9 per cent were

married, 17.7 per cent were single, 45.9 per cent were widowed, 1.4 per cent were divorced, and one-tenth of one per cent were unknown. No precise study of the bearing of marital condition on mortality statistics can be made, however, without a detailed statement of the age distribution of the population. The age groups used in the census statistics do not coincide with the age groups used in the tabulation of death statistics, so that the two sets of figures cannot be used together. Table 10, on page 33, shows the number of deaths of males and females 15 years of age and over by marital condition.

Nativity. — Of the Massachusetts residents whose nativity was reported on the death certificates in 1944 nearly two-thirds (61 per cent) were native, and 38.7 per cent were foreign. There were three-tenths of one per cent whose nativity was not reported.

Seasonal Distribution of Deaths. — The largest number of deaths during any month occurred in January (5,772), and the next largest number in March (4,660) and December (4,396). Since the months are not of equal length, the monthly incidence must be reduced to a uniform basis. The average daily number of deaths for 1944 was 140. The months showing the highest average for the year were January (186), March (150), February (148), and April (145). Table 11, on page 33, shows the number of deaths in each month of 1944, in counties, and in cities having over 50,000 inhabitants in 1940.

Infant Mortality.

Much credit is due to physicians, hospitals, public health officials and mothers for the gratifying results obtained in their campaign against infantile diseases. The present low rate of infant mortality, together with the steadily declining rate over a long period of years, is largely due to the constantly improving methods of infant feeding and the continued developments in community and home sanitation.

The infant mortality for residents of the State in 1944 was 33.0 per 1,000 live births. This rate has been moving steadily downward being largely due to the reduction in deaths from gastro-intestinal, respiratory and communicable diseases. Reference to Table 28, on page 201, shows in striking manner the remarkable reduction in infant mortality, actual decrements without regard for increase in the number of births and without regard for increase in population.

In the ten years from 1935 to 1944, there has been an increase of 25.5 per cent in the number of live births registered. In 1944, deaths of Boston residents under 1 year of age numbered 525 or 36.8 per 1,000 live births. The rates for previous years were 35.4 in 1943, 33.9 in 1942, 38.0 in 1941 and 42.4 in 1940. In the ten years from 1935 to 1944 there has been an increase of 2,181 in the number of live births registered. For the remainder of the State, the number of births registered increased 29.4 per cent during this period. The infant mortality rates for the State, exclusive of Boston, decreased from 60.9 per 1,000 live births in 1928 to 32.2 in 1944, as compared with a decrease in Boston from 76.9 in 1928 to 36.8 in 1944. (See Table 28, on page 201.)

Deaths under one month and also under one year of age in each municipality are shown in Table 24, on pages 197 to 199.

The infant mortality rates in municipalities having 15,000 or more inhabitants in 1940 are shown for the years 1937 to 1944 in Table 26, on page 200.

The highest proportion of deaths occurs in the early period of infancy and especially is this true of the first few days. In 1944, 1,489 deaths occurred in the first week, constituting 57.7 per cent of all deaths under 1 year of age. On the first day the percentage of deaths (34.3 per cent) was higher than on any other day. In the first month of life there were 1,754 deaths, or 67.9 per cent of all infant deaths.

In the first three months there were 2,046 deaths, or 79.2 per cent of all infant deaths. Eighty-nine and four-tenths per cent of the infant deaths occurred in the first half of the year.

Over three-fourths, 86.2 per cent, of the 1,489 babies who died less than one week after birth, died of prematurity, congenital debility, malformations, or injuries received at birth. Of the 1,677 babies who died from these causes before reaching the age of 1 year, 46.4 per cent died in less than one day, 76.6 per cent died in less than one week, and 87.2 per cent died in less than one month. Gastric and intes-

tinal diseases which were formerly important factors in causing infant deaths have greatly decreased due to the improvement of hygiene and popular education. These causes claimed 101, or 3.9 per cent of the babies who died before reaching 1 year of age, as compared with 6.3 per cent in 1943. Twenty-one and eight-tenths per cent of the babies who died from these causes died in less than one month after birth, 20.8 per cent within one but less than two months after birth, and 16.9 per cent within two but less than three months after birth.

The largest number of deaths of infants is due to developmental and wasting diseases*, and the figures indicate a reduction in infant mortality due to these causes, — from 21.2 deaths per 1,000 live births in 1937 to 17.9 in 1944. Respiratory diseases also caused a considerable number of deaths. The number of infant deaths from bronchopneumonia has fluctuated somewhat since 1940 when there were 310 infant deaths from this cause, 229 in 1941, 242 in 1942, 349 in 1943 and 284 in 1944. The principal causes of infant deaths for the years 1937 to 1944 are shown in Table 30, page 202.)

Causes of Death.¹

Sources of Error in Mortality Statistics. — The chief element of error in mortality statistics lies in the inaccuracy of the statement of the cause of death as reported by the attending physician, who may not have been in a position to feel reasonably certain as to the nature of the terminal illness. Statements of cause of death are often incomplete as a result of the unintentional failure of the physician to state all the morbid conditions known to him which resulted in the death. Again, the physician sometimes fails to enter on the death certificate a qualifying term, which if given would modify the classification of the cause of death. Beginning with 1940, the 1938 revision of the Manual of International List of Causes of Death was used in the assignment of causes of death.

It should also be borne in mind that the process of classifying the thousands of different terms — some of them of a very indefinite or unsatisfactory character — under the 200 titles of the International List of Causes of Death presents many difficulties which are seldom fully appreciated by those who have not engaged in the work of classification. Even if each certificate of death received during 1944 bore only a single cause, the process would present many difficulties. Many certificates, however, bear statement of two or more causes instead of one and a system of selection, according to the precedents and rules of the International Committee, has been adopted by the United States Bureau of the Census, and is used in the Division of Vital Statistics. Because of the complications attendant upon any attempt to show all primary and secondary terms in relation, it becomes necessary to base all statistical compilations of causes of death on the selection of a preferred term. This means that when two or more morbid conditions are given on a certificate one of them must be selected as the cause under which the death must be classified. Special weight has usually been given to communicable diseases when combined with other causes, and assignments are made to external causes when serious enough to be a factor in the cause of death.

Principal Causes. — More than two-thirds of the 51,454 resident deaths reported in 1944 were caused by diseases of the heart, cancer, cerebral hemorrhage (including embolism and thrombosis), pneumonia and nephritis. These diseases, together with tuberculosis in all forms, external causes, malformations and the diseases of early infancy caused 83.9 per cent of the deaths for the year. There were 51,870 registered deaths in 1944, the allocated rate being 11.8 and the registered rate, 11.9. Table 19, on page 193, shows the number of residents of the State who died from these causes.

Heart Disease,* as usual was the leading cause of resident deaths in 1944, the total number being 18,922 corresponding to a rate of 435.4 per 100,000 population as compared with 19,807 deaths or 456.5 per 100,000 in 1943. Deaths from heart disease, reported as having occurred in Massachusetts numbered 19,010 or 437.5 per 100,000 population. The great increase in the last few years was partly due to the fact that under the revised classification of causes of death, diseases of the

¹ In this report an asterisk (*) has been used in the text to denote those certified causes of death which the committee, after careful consideration, reported were acceptable statements of causes of death without autopsy.

coronary artery, which were formerly classified as arterial diseases, are now classified under diseases of the heart.

Cancer and other Malignant Tumors. — Cancer ranked second in numerical importance among all the causes of death. The resident deaths from cancer were 7,557, the rate being 173.9 per 100,000 population, with cancers of the digestive tract and peritoneum claiming 47.8 per cent of these deaths, cancer of the genitourinary organs 21.9; breast 10.3 per cent; respiratory system 7.6 per cent; buccal cavity and pharynx 3.4; skin 1.0 and 8 per cent were of other or unspecified organs. The death rate from cancer has steadily risen from 89.9 in 1910, to 170.6 in 1943 and 173.9 in 1944. It is possible that at least a part of this increase is due to more correct diagnosis and greater care on the part of the physicians in making reports, but a part at least is due to the lengthened span of life, resulting in a larger number of people reaching the older age groups.

Among the male deaths the per cent distribution was as follows: digestive organs and peritoneum 54.1; genitourinary organs 17.1; breast .3; respiratory organs 12.3; buccal cavity and pharynx 6.2; skin 1.2 and other or unspecified organs 8.8. The per cent distribution of the female deaths was as follows: digestive organs and peritoneum 42.3; genitourinary organs 26.1; breast 18.9; respiratory system 3.4; buccal cavity and pharynx 1.1; skin 1.0 and other or unspecified organs 7.3.

Of cancer of the digestive organs and peritoneum, cancer of the stomach claimed the largest number of males, 17.9 per cent, while cancer of the intestines claimed 16.1 of the females. Among the deaths from cancer of the genitourinary organs, 20 per cent were of the prostate gland and 38.6 per cent were of the uterus. Almost three-fourths of the deaths from cancer of the lungs were of males, 73.2 per cent, while 26.8 per cent were of females. In the buccal cavity group cancer of the pharynx was responsible for 32.3 per cent of the male deaths and for 7.5 per cent of the female deaths. Over one-half, 52.4 per cent of the deaths from cancer of the skin were of males; while 47.6 per cent were females.

Registered deaths from cancer showed an increase of 103 and a total of 7,690 in 1944, corresponding to a death rate of 177.0 as compared with 174.9 in 1943. Of the resident deaths from cancer more than one-half, 53.6 per cent were of females.

Cerebral Hemorrhage, Cerebral Embolism and Thrombosis* were the causes of 4,708 deaths of residents, or 108.3 per 100,000 population. The death rate from these diseases has fluctuated somewhat, 107.5 in 1940, 105.5 in 1941, 107.8 in 1942 and 113.4 in 1943. These diseases caused 4,733 registered deaths, corresponding to a rate of 108.9 per 100,000 population.

Pneumonia (including bronchopneumonia) caused 2,704 resident deaths in 1944 or 62.3 per 100,000 population, compared with 3,176 deaths, or 73.6 per 100,000 population in 1943. It also was responsible for 2,724 deaths occurring in the State with a rate of 62.7 per 100,000 population.

Nephritis*, all forms, was the cause of 2,403 deaths of Massachusetts residents in 1944, corresponding to a rate of 55.3 per 100,000 population, as compared with 63.2 in 1943, 60.2 in 1942, 62.0 in 1941, 69.9 in 1940, and an average rate of 69.5 for the five years from 1935 to 1939. There were 2,267 deaths caused by chronic nephritis*, and 60 by acute nephritis. Of the registered deaths 2,295 were from chronic nephritis* and 64 from acute nephritis, with a total of 2,432 for all forms of nephritis and a death rate of 56.0 per 100,000 population.

Tuberculosis in its various forms claimed 1,696 victims in 1944, of whom 1,612 died from tuberculosis of the respiratory system*. Deaths due to the latter cause constituted 3.1 per cent of all resident deaths during the year, the rate being 37.1 per 100,000 population. In 1910 the death rate from tuberculosis of the respiratory system was 133.2. Since then the decline has been continuous from year to year with the exception of 1918 when the rate was 130. However, this disease has fluctuated during recent years, there being an increase of .8 in 1941 and .6 in 1940 over the preceding years respectively. Tuberculosis (all forms) was responsible for 1,766 deaths registered in Massachusetts including 1,680 deaths from tuberculosis of the respiratory system. The rates for the latter disease were 3.3 per cent of all deaths during the year and 38.7 per 100,000 population.

Diabetes* was the cause of 1,562 deaths of Massachusetts residents in 1944, a decrease of 85 from those reported in 1943 and was responsible for a rate of 35.9 per 100,000 population. The rate from this disease has shown a steady increase for the past five years with the exception of 1941 and 1942 when the rates were 36.0 per 100,000 population. The rate was 36.4 in 1940 and 38.0 in 1943. Over two-thirds, 67.1 per cent, of the resident deaths from diabetes were of females, with the age periods 65 to 74 years having the greatest number, 24.5 per cent; of the males 11.6 per cent were in the same age periods. This disease attacked persons 50 years of age and over most severely and these age groups had a rate of 92.7 per cent of diabetic deaths, 63.6 per cent being females and 29.1 per cent males. Deaths from diabetes reported as having occurred in the State numbered 1,573 or 36.2 per 100,000 population.

Congenital Debility* and Malformations*, including premature birth, caused 1,446 resident deaths in 1944, corresponding to a rate of 33.3 per 100,000 population. The death rates from these causes have shown a steady decline from 109.2 in 1910 (with the exception of 1912, 114.2). There were 1,469 registered deaths from these diseases, resulting in a rate of 33.8 per 100,000 population.

Alcoholism and Cirrhosis of the Liver* (specified as alcoholic, etc.) were responsible for 642 resident deaths in 1944, corresponding to a rate of 14.8 per 100,000 population. Of these 121 were due to alcoholism which is a decrease of 21 from those reported in 1943, corresponding to a rate of 2.8 per 100,000 population. These diseases caused 649 deaths in Massachusetts with a rate of 14.9 per 100,000 population. Alcoholism claimed 122 of these, or 2.8 per 100,000 population.

Maternal Mortality.* Deaths from puerperal causes of residents of the State in 1944 totalled 140, corresponding to a rate of 17.7 per 10,000 confinements. This of age rate was a decrease from 1943, the rate being 19.6 and 21.1 for 1942.

Puerperal septicemia* was responsible for 48 resident deaths including 11 due to abortion with septic conditions, the rates for this cause in 1944 being 6.1 per 10,000 confinements. In 1943 the rate was 7.0 and in 1942, 7.9. Of the deaths from these causes 22 were from 20 to 29 years of age, there were none under 20 years and the remainder, 26, were from 30 to 49 years of age.

Diarrhea and Enteritis* caused 210 deaths of residents in 1944, or 4.8 per 100,000 population. Fifty-one per cent of the total number of deaths charged to these causes in 1944 were of infants under 2 years of age. The rates from this cause for all ages were 4.8 in 1940, 5.8 in 1941, 4.4 in 1942 and 6.7 in 1943. During 1944 registered deaths totalled 216 from these causes, or 5.0 per 100,000 population. The number of infants under 2 years of age was 108 or 50 per cent of the total number claimed by these diseases.

Principal Communicable Causes. (See Table 20.) The deaths from epidemic and infectious diseases have shown a great decline in the last 25 years. While certain of these diseases have fluctuated considerably during this period they have, on the whole, shown a steady decrease.

Influenza was responsible for 204 deaths of Massachusetts residents, or 4.7 per 100,000 inhabitants, as compared with 3.4 in 1940, 6.5 in 1941, 2.3 in 1942 and 4.6 in 1943. The number of registered deaths was 203, or 4.7 per 100,000 population. In 1918 there were 13,783 deaths from this cause, corresponding to a rate of 352.7 per 100,000 population. Since 1921 this rate has fluctuated between 2.3 in 1942 and 27.9 in 1929.

Whooping Cough,* one of the principal epidemic maladies of childhood, was responsible for 15 deaths of both adults and children, the number of registered deaths being the same or .3 per 100,000 population. This is a decrease from 1943 of .6 per 100,000 population.

Measles,* another childhood disease, caused 20 resident deaths in 1944, or .5 per 100,000 population. This rate was .5 in 1943, .4 in 1942, .1 in 1941 and .3 in 1940. The total number and death rate for deaths occurring in Massachusetts were the same.

Scarlet Fever,* another epidemic disease of childhood, was the cause of 14 deaths in 1944, corresponding to a rate of .3 per 100,000 population. These rates have changed from year to year during the period 1920 to 1944, the highest being 5.6 in 1920 and the lowest, .2 in 1942. The number and rate for registered deaths were the same in 1944.

Diphtheria and Croup* — which are classed together in the statistics, but practically all of which are diphtheria — number 10 or .2 per 100,000 population. There has been a decided decrease in this disease since 1900 when the number of deaths was 1,475, with a corresponding rate of 52.6 per 100,000 inhabitants. This rate was .3 in 1943, .1 in 1942, .3 in 1941 and .2 in 1940. The total and rate for deaths registered in the State were the same.

Epidemic Cerebrospinal Meningitis claimed 81 victims in 1944, as compared with 119 in 1943, 34 in 1942, 25 in 1941 and 15 in 1940. The rate for this cause was 1.9 per 100,000 population. This disease was responsible for 82 registered deaths, or 1.9 per 100,000 population.

Encephalitis Lethargica, commonly known as sleeping sickness, is a comparatively new disease and has varied little in the last five years, the number of deaths in 1944 being 13, 9 in 1943, 13 in 1942 and 1941 and 10 in 1940. The registered deaths were 14 in 1944.

Dysentery caused 9 deaths in 1944, also being responsible for the same number of registered deaths. There were 6 in 1943, 2 in 1942, 10 in 1941 and 8 in 1940.

Typhoid Fever* has shown a steady decline since 1910, having dropped from 12.2 in that year to less than one-tenth of 1 per 100,000 in 1944. This decline is greater, relatively, than that shown for any other important cause of death. The total number of deaths due to typhoid fever in 1944 was 1 as compared with 5 in 1943, 1 in 1942, 4 in 1941 and 8 in 1940. The number and death rate for registered deaths were the same during 1944.

Acute Poliomyelitis* has shown a decrease for 1944, the number of deaths being 17, or .4 per 100,000 population, as compared with .4 in 1943, .1 in 1942 and 1941 and less than one tenth of 1 per 100,000 population in 1940. Deaths reported as having occurred in the State were 15 in 1944 with a rate of .3 per 100,000 population.

There were no deaths from Smallpox in 1944.

Violent Deaths. Death rates from violence during the past five years per 100,000 population were 76.8 in 1940, 79.0 in 1941, 85.2 in 1942, 82.7 in 1943 and 75.9 in 1944. The death rate from violence was 75.2 per 100,000 population for registered deaths in 1944.

Resident deaths due to Railroad Accidents and Injuries* totalled 57 in 1944, and corresponded to a rate of 1.3 per 100,000 population. The rates for the previous years were 1.4 in 1943, 1.0 in 1942, .9 in 1941 and 1.1 in 1940. Registered deaths had 56 with a rate of 1.3 in 1944.

Resident deaths resulting from Street-car Accidents and Injuries* numbered 26, or .6 per 100,000 population. The registered deaths had the same total and rate.

Automobile Accidents and Injuries* caused 506 deaths of residents in 1944, including 11 deaths from automobile and railroad collisions, and 2 deaths from automobile and street-car collisions. The rate was 11.6 per 100,000 population, as compared with 11.2 in 1943, 12.5 in 1942, 16.8 in 1941 and 15.0 in 1940. These accidents caused 516 deaths registered in Massachusetts in 1944 or 11.9 per 100,000 population. Of these, 12 deaths were from automobile and railroad collisions and 2 deaths from automobile and street-car collisions. No accurate data are available for measuring the death rate per number of automobiles in use, as the statistics compiled by the Department of Public Works show the number of machines registered, and thus contain duplications, since one machine may be registered more than once in a calendar year. It is probable, however, that the increase has not been so rapid as that of the number of machines in use.

Effects of Heat. — In 1944 the resident deaths from this cause numbered 40. In 1943 there were 19 deaths, in 1942, 5; in 1941, 12; and in 1940, 3. The total deaths occurring in the State from this cause were 39 in 1944. The highest temperature recorded in 1944 was 101 degrees on August 12. The highest temperature recorded at the Weather Bureau of the United States Department of Agriculture since 1900 was 104 degrees on July 4, 1911. The next highest temperature was 103 degrees on July 22, 1926.

Deaths of residents caused by Machinery Accidents* in 1944 numbered 29 or .7 per 100,000 population. The corresponding figures for previous years were .4 in 1940, .9 in 1941, 1.2 in 1942 and 1.0 in 1943. Deaths registered in Massachusetts were the same in 1944.

The number of Suicides* of Massachusetts residents in 1944 was 440, or 10.1 per 100,000 population. The rates since 1939 have been: 1940, 13.2; 1941, 12.6; 1942, 11.7 and 1943, 10.2. Reported deaths from suicide in 1944 numbered 453 or 10.4 per 100,000 population.

Resident deaths caused by firearms numbered 110 in 1944, corresponding to a rate of 2.5 per 100,000 population. Of these deaths 67 were suicides, 11 were homicides, and 32 were accidental (including those concerning which the status as to suicide, homicide, or accident was in doubt). The total reported deaths caused by firearms in 1944 were 104, or 2.4 per 100,000 population. These deaths included 66 suicides, 12 homicides, and 26 accidents.

Resident deaths from Homicide* numbered 55 in 1944, or 1.3 per 100,000 population. The rates for homicide in recent years are 1.6 in 1940, 1.5 in 1941, 1.3 in 1942, and .8 in 1943. There were 60 registered deaths from homicide in 1944, or 1.4 per 100,000 population.

The causes of deaths of males and females for each month for the Commonwealth for the complete International List of Causes of Death with certain subdivisions are shown in Table 13, on pages 35 to 57. The causes denoted by letters, shown separately in indented type, Table 13, are a part of the total cause shown in the International List. Ages, grouped in five year periods, are shown in Table 14, on pages 58 to 101. For comparative purposes those residents of other states dying in Massachusetts are shown in Table 15 by months and age periods according to the International List while those of residents of Massachusetts dying out of the State are shown in Table 16. In Table 17, on pages 136 to 162, the deaths are shown for 58 causes and groups of causes for each county and municipality.

For the Commonwealth as a whole the deaths and death rates for the seven years 1938 to 1944 are shown for the 44 causes and groups of causes in the Abridged International List in Table 21, on pages 194 and 195. The relation of this list to the Detailed International List is shown in the Appendix. In addition to the above presentations, certain other tables showing the causes of death are presented on pages 196 to 207.

DEATHS INVESTIGATED BY MEDICAL EXAMINERS.

Source of Data. — The statistics of deaths investigated by medical examiners published in this report are based upon annual returns made by medical examiners and associates to the Secretary of the Commonwealth of deaths supposedly due to violence, the cause and manner of which have been investigated during the year. Deaths supposedly due to violence include not only deaths caused directly or indirectly by traumatism (including resulting septicemia), and by the action of chemical (drugs and poisons), thermal, or electrical agents, and deaths following abortion, but also deaths from diseases resulting from injury or infection related to occupation, the sudden deaths of persons not disabled by recognized disease, and those of persons found dead.

Medical examiners are often called upon to view cases in which the death was not due to violence (heart disease, apoplexy, etc.) but where the death was simply sudden or where no physician had been in recent attendance. Medical examiners are also required to certify that they have viewed bodies to be cremated, and to make personal inquiry into the cause and manner of death.

Number of Deaths Investigated. — The number of deaths investigated by the medical examiners in 1944 was 10,378, or 20 per cent of the total number of deaths

which occurred during the year, as compared with 11,465 deaths in 1943 when the rate was 20.9. Almost two-thirds (63 per cent) of these deaths were of males. Of the deaths investigated by medical examiners, 2,967, or 28.6 per cent, were reported as due to violence, while among the deaths returned to the registrars, 3,269 were reported as due to violence.

The largest number of cases investigated by medical examiners in 1944 was in Suffolk County, 2,456, as compared with 2,764 in 1943. Of the deaths investigated in Suffolk County, 752, or 30.6 per cent, were reported as due to violence (see Table 39, pages 216 and 217).

Autopsies. — Autopsies were made in 986, or 9.5 per cent, of the cases investigated by the medical examiners in 1944, as compared with 8.5 per cent in 1943, 9.7 per cent in 1942, 10 per cent in 1941 and 9.5 per cent in 1940.

The highest proportion of autopsies was in Suffolk County where 26.3 per cent of the views were autopsied, there being 26.3 per cent in 1943. Table 40, on pages 216 and 217, shows the number of views and the number of autopsies in each county in each year from 1935 to 1944, and the number and per cent of views autopsied for the ten-year period, 1935 to 1944.

Cause of Death. — Over one-half (60.3 per cent) of the deaths viewed by medical examiners in 1944 were from causes not due to violence, 28.1 per cent were due to violence, and .5 per cent were stillbirths. One thousand, one hundred and one or 10.6 per cent of the views were for cremations.

Deaths from causes not due to violence numbered 6,253, of which 6,107 were from natural causes and 105 were due to alcoholism.

Deaths due to violence numbered 2,967, of which 2,481 were due to accident or negligence, 427 were suicides, and 59 were homicides.

Of the 2,481 deaths due to accident or negligence, 1,069 were due to falls, blows, and falling bodies, 476 were due to automobile accidents, 12 of which were railroad and automobile accidents, 221 resulted from drowning, 54 were due to railroad accidents, and 651 to other causes. There was 1 street-car and automobile collision.

Suicides numbered 427, or 14.4 per cent of the deaths due to violence. Suicides committed by the use of illuminating and other gases, 119, and by hanging or strangulation, 107, constituted over one-half (52.9 per cent), of the total number. The number of suicides by firearms was 68, by poisons, 37, by drowning, 41, and other methods, 55. Almost three fourths (70 per cent) of the suicides were males.

Of the 427 persons committing suicide, 66 were 60 to 69 years of age, 96 were 50 to 59 years of age, 86 were 40 to 49 years of age, 40 were 20 to 29 years of age, 67 were 30 to 39 years of age, 63 were over 70 years of age, and 9 were under 20 years of age. Among the male suicides the largest numbers were from 50 to 59 years of age, 68, and from 40 to 49 years of age, 57, and among the female suicides the largest numbers were from 40 to 49 years of age, 29, and 30 to 39 years of age, 28. The most common method of committing suicide was by poisonous gas.

Homicides numbered 59, of which 10 were by firearms, 11 were by cutting or piercing instruments, 31 by other means, and 7 were cases of infanticide. Of the 59 homicides, 38, or 64.4 per cent, were males.

Table 22

DEATH RATES PER 100,000 POPULATION BASED ON ANNUAL AVERAGE
NUMBER OF DEATHS FOR THE FIVE-YEAR PERIOD OF WHICH THE CENSUS YEAR
IS THE MEDIAN YEAR:¹ CENSUS YEARS 1910 TO 1940.

YEARS.									
	All causes.*	Scarlet fever.*	Diph- theria and croup.*	Tuber- culosis of the respi- ratory system.*	Meas- les.*	Cancer.	Dia- betes.*	Heart Disease.*	Ne- phritis.*
	8	10	13	35	45-55	61	90-95	130-132	
1910	1,556.2	7.0	18.1	130.0	6.9	89.9	16.3	183.6	89.6
1915	1,470.4	5.2	18.8	116.8	7.5	102.2	18.8	214.3	94.7
1920	1,461.1	3.9	15.6	100.2	7.6	114.2	19.8	199.4	93.0
1925	1,249.8	4.1	11.1	70.6	6.2	124.3	20.0	238.4	85.6
1930	1,181.9	2.4	4.3	56.5	3.0	136.9	24.5	279.0	85.6
1935	1,167.2	1.5	1.0	42.5	1.0	149.9	30.9	347.8	75.6
1940	1,150.1	.4	.3	34.5	.3	163.3	34.9	403.0	65.1

¹ This method eliminates any peculiarities in the census year and makes the rates more typical of the period as a whole.

* Exclusive of stillbirths.

Table 23

DEATHS PRODUCED BY EXTERNAL CAUSES: 1920 TO 1944.

Table 23										
YEARS.	Total.	Trau- matism by fall.	Auto- mobile (includ- ing rail- road and street car col- lisions).	Drown- ing.	Burns (confla- gration ex- cepted).	Absorp- tion of poison- ous gas.	Exces- sive heat.	Exces- sive cold.	Suicide.	Homi- cide.

INTRODUCTION.

Birth Registration.—Birth registration has been compulsory in Massachusetts since Colonial times. It was one of the first States to be included in the registration area of the United States Census Bureau.

The physician* in attendance at the birth of a child is required, within forty-eight hours, to give notice and make a complete return within fifteen days of the facts required for record to the clerk of the town of birth. Parents, within forty days are required to give notice to the registration official of children born to them.

In addition to the above, persons in charge of a hospital, almshouse, or other institution, public or private, are required to give, on or before the fifth day of each month, notice to the town clerk of every birth occurring among the persons in such institution during the preceding month. The law also provides that the clerk of each town may annually in January ascertain the facts required for record of all children born in his town during the preceding year and resident therein.

Returns are made in the first instance to the local clerks of the city or town in which the birth occurred with the exception of Boston where the City Registrar is the official in charge.

The records on file in the Division of Vital Statistics are attested copies of the originals filed with local officials. The law has required the filing at this central record office since 1841. During this time 5,978,736 births have been filed and indexed. Since the establishment of the office of State Registrar of Vital Statistics in 1918, a systematic campaign has been carried on to obtain prompt and complete compliance with the birth registration laws. People are beginning more and more to realize the importance of birth records, so complete registration should soon be an accomplished fact.

Importance of Birth Records.—Records of birth are becoming more important every day. Government and defense agencies as well as many other civil bureaus are demanding proof of citizenship through birth certificates. This has caused a tremendous increase in the issuance of certified copies of birth records as defense agencies require certified copies and not abstracts. The applications for certified copies are being made in person and by mail from all parts of the country and while the Division of Vital Statistics is over crowded with requests these demands have been met. As Massachusetts is one of the few states that have records previous to 1912 there is a great demand at all times. This great demand for birth records will continue as they are also required for Old Age Assistance, Social Security and allotment purposes.

There is hardly a relation of life, social, legal, or economic, in which the evidence

* Midwives are not recognized in Massachusetts. The courts have held that the practice of midwifery is the practice of medicine, and as there is no provision under the law for licensing midwives, any one who practices midwifery is violating the medical registration laws.

furnished by an accurate registration of births may not prove to be of the greatest value, not only to the individual, but also to the public at large. It is not only an act of civilization to register Birth Certificates, but also good business, for they are frequently used in many practical ways:

1. As evidence to prove the age and legitimacy of heirs;
2. As proof of age to determine the validity of a contract entered into by an alleged minor;
3. As evidence to establish age and proof of citizenship and descent; in order to vote;
4. As evidence to establish the right of admission to the professions and to many public offices;
5. As evidence of legal age to marry;
6. As evidence to prove the pension claims of widows and orphans;
7. As evidence to determine the liability of parents for the debts of a minor;
8. As evidence in the administration of estates, the settlement of insurance and pensions;
9. As evidence to prove the irresponsibility of children under age for crime and misdemeanor, and various other matters in the criminal statute;
10. As evidence in the enforcement of laws relating to education and to child labor;
11. As evidence to determine the relations of guardians and wards;
12. As proof of citizenship in order to obtain a passport;
13. As evidence in the claim for exemption from or the right to jury and military service.

Copies of records of births occurring during the preceding year are required by statute to be forwarded annually to the Division of Vital Statistics but many of the clerks co-operate with the Division by making periodic returns during the year.

After the statutory period has elapsed for filing copies of the records with the Department of the Secretary of the Commonwealth, no delayed returns or corrections are accepted unless by a deposition made by the parents, supported by written evidence at the time of birth, or by deposition of the attending physician at the time of birth, or based upon a writing made at the time by a person since deceased charged with making the return in the first instance. As the evidential value of a record depends for its authenticity upon the fact that it is made contemporaneously with the happening of the event recorded, the registrars are required to exercise considerable care by requesting written evidence made soon after the time of birth before accepting delayed returns, particularly if it is some years after the birth occurred. This holds true of corrections which can only be made in accordance with the facts as they actually existed at the time the birth occurred, with the exception of an illegitimate child who is legitimized through the subsequent marriage of its parents; in these cases the record may be amended, so that the child will appear on the record as the legitimate offspring of its parents.

As a means of eliminating errors from physicians' returns of births, Chapter 434, Acts of 1941 requires that registrars send a supplemental report of the physician's return to the parents for their verification; and when the certificate is returned properly signed by a parent it is filed with the physician's certificate. This is a splendid system as it eliminates any claim later than an error has been made in the return of birth.

Adoptions.—Chapter 97, Acts of 1938 amended the statute relating to adoptions and provides that legally adopted children may have their birth records amended so as to appear as the natural children of the adoptive parents. Illegitimate children who have had their names legally changed may have their birth records amended to agree with the name decreed by court.

Certain Records Impounded.—Returns and records of illegitimate and abnormal sex births are impounded by statute from inspection. The law prohibits the issuance of copies of such records to the general public. These records can be inspected by or copies issued only to the child, the mother, attorney for the child, its legal guardian or to others by order of the court.

Treatment of Infants' Eyes after Birth.—Chapter 46, Acts of 1943 requires attending physician to record on the birth certificate the use of a prophylactic remedy with which he has treated the eyes of a child whose birth he has personally attended.

Allocation.—Births are charged to the place of the event and also are allocated to the place of residence of the parents. This insures as near a true rate as possible and has a marked effect on municipalities which are large hospital centers. These cities and towns in the past have been charged with a high rate and small communities without hospital facilities have shown a low rate. The usual place of residence has been used as a basis for all births occurring outside the State as well as for those in the State. In the case of institutions, births have been allocated to the place of residence before entrance.

Live Births.—In the Commonwealth in 1944 there were 79,045 live births registered, a decrease of 7,767 or 8.9 per cent as compared with the number registered in 1943. There was a decrease in 1944 of 5,707, or 7.9 per cent in the number of infants born to native parents; a decrease of 366, or 10.7 per cent to foreign-born parents; and a decrease of 1,692 or 14.6 per cent, to mixed parents, namely, one parent native, the other foreign-born, as compared with 1943. The allocated births numbered 78,140 for 1944.

Birth Rate.—In proportion to the total population, the total births registered were equivalent to a rate of 18.2 per 1,000 population, and is a decrease of 1.8 per 1,000 over that of 1943. This rate is also 1.1 per 1,000 above the average for the five years 1939 to 1943. The allocated births for 1944 had a birth rate of 18.0.

Changes in Birth Rate.—The birth rate for the Commonwealth attained the highest point on record, 30.2 in the year 1857. Since then the rate, although fluctuating considerably, has shown a marked decline, and a gradual decline since 1924 until 1940, when an upward trend was shown and has since continued with the exception of 1944. During this period the infant death rate has also declined, the infant mortality rate for 1942 being the lowest ever recorded, so that the number of babies who survive the dangers of infancy is becoming steadily greater. This fact is shown in the infant mortality tables.

Stillbirths.—Chapter 100, Acts of 1936 defines stillborn children for the purposes of Vital Statistics: "A stillborn child shall be deemed to be a foetus born after a period of gestation of not less than five months, in which foetus there is no attempt at respiration, no action of heart and no movement of voluntary muscle—." Previous to 1936 there was no statute defining a stillbirth, consequently many returns had been made which, under this definition, would not have been returned. The statute now clearly defines a stillbirth and precludes any misunderstanding as to what returns should be made.

Stillbirths allocated in 1944 number 1,852. The rate per 1,000 live births allocated was 23.5 in 1943, 24.8 in 1942 and 27.1 in 1940. The rate for 1944 is 23.7.

Birth Rates, Highest.—The six municipalities having 15,000 inhabitants or more showing the highest registered birth rates in 1944 are: Norwood, 46.5; Winchester, 43.4; Winthrop, 42.7; Weymouth, 38.6; Chelsea, 37.9; and Brockton, 35.9.

Variations in the birth rates of different communities may be partially accounted for by differences in the proportions of married women of child-bearing age residing therein, and by the presence of hospitals to which expectant mothers go from neighboring cities and towns in order to take advantage of the best medical advice and obstetrical care during pregnancy and childbirth. The allocated birth rates help to substantiate this statement. The communities showing the highest rates are: Braintree, 26.1; Weymouth 24.8; Wakefield, 23.0; Winthrop, 22.6; Leominster, 22.4; and Quincy, 21.2. Cambridge which showed the highest registered rate (32.4) of any place in the State of over 100,000 population also has the highest rate (20.5) through the allocation of births.

Sex Proportion at Birth.—It has never been determined whether the higher proportion of masculine than of feminine births is the result of definite causes or not.

Registered births of males in 1944, numbers 40,684 and those of females 38,361, corresponding to a ratio of 1,061 male births to 1,000 female births. Allocated births numbered 40,197 males and 37,943 females in 1944, with a ratio of 1,059 male to female births.

Nativity of Parents.—The number of registered births where both parents were native (66,104) exceeded the number of births where both parents were foreign-born (3,062) by 63,042, or 2,158.8 per cent in 1944. Children of mixed parents (one parent native and one parent foreign-born) numbered 9,879 in 1944 as compared with 11,571 in 1943. Allocated births numbered 65,322 children born of native parents, 2,867 of foreign parents and 9,951 of mixed parentage.

The proportion of children born of native parents declined from 1890 until 1910, since then, the proportion had steadily increased. In 1944 the proportion was 83.6 for registered and allocated births.

The proportion of children born of parents one of whom was native and the other foreign-born was 12.5 for the registered births and 12.7 for the allocated births in 1944 as compared with 13.3 in 1943 for registered and 13.4 for allocated births.

Plural Births.—In 1944 there were 785 cases of plural births (allocated), 774 cases of twins and 11 cases of triplets, or 9.9 pairs of twins per 1,000 live births (allocated), and one-tenth of one case of triplets.

Natural Increase.—The excess of the birth rate over the death rate shows the ratio at which the community is reproducing itself by natural increases. In every year since the compilation of birth statistics was started the birth rate has been higher than the death rate.

The rate of natural increase for 1944 was 6.3 per 1,000 population for registered births and averaged 5.2 for the five years 1939 to 1943. The rate of increase was 6.2 for allocated births.

The number of births is greatly in excess of the number of deaths, and this fact coupled with the steady decrease in infant mortality, has resulted in a net gain in the natural increase in population. The excess of births over deaths amounted to 57.6 per cent in 1943; 65 per cent in 1942; 39.2 per cent in 1941; 28.9 per cent in 1940 and 24.4 per cent in 1939. The excess of registered births over registered deaths in 1944 was 27,175 or 52.3 per cent, while the increase of allocated births over allocated deaths was 23,729 or 43.6 per cent.

For comparisons previous to 1900 relative to the natural increase from 1851, and for figures from that date up to and including 1919, reference may be made to the Annual Report of Vital Statistics of Massachusetts for the year ending December 31, 1919, Public Document No. 1.

INTRODUCTION.

Marriage Registration.—The public registration of marriages has been required for many years in Massachusetts. Records of marriage are made in the first instance in the cities and towns of the State where the contracting parties dwell and if the ceremony is solemnized in a town other than where the parties reside, in the town where the ceremony is performed.

Since 1841 it has been required that copies of these records be forwarded annually to the Secretary of the Commonwealth, but many City and Town Clerks co-operate by making periodic returns throughout the year. From 1841 to 1944, inclusive, there have been 5,280,348 marriages reported, recorded and tabulated in this department.

Source of Data.—The marriage statistics in this report are compiled from attested copies of the records of marriages recorded in every city and town. Persons intending to be joined in marriage in Massachusetts must file a notice of intention in the town in which they respectively dwell, and this notice of intention must contain the facts required for record and be sworn to by each of the parties to the marriage. Chapter 561, Acts of 1943 provides that in cases of persons, one or both of whom is in the armed forces, such notice may be given by either party, provided one is a resident. If a marriage is performed in a town other than the town issuing the license, a copy of the license is required to be made and forwarded by the clergyman or magistrate to the clerk of the municipality in which the ceremony was performed. Five days after the notice of intention has been filed, unless a court waives the requirement, the marriage license may be issued with all the facts set forth in the notice of intention which are required for record. This certificate is presented to the clergyman or magistrate before whom the marriage is performed, and the facts as to the ceremony are certified by that person. Between the first and tenth days of the month following the ceremony the license or licenses must be returned by the clergyman or magistrate to the office or offices issuing the same.

Decrease of Marriages.—There has been a decrease in marriages solemnized during the year 1944 from the number in 1943. For the year 1944, there were 34,670 marriages recorded as compared with 37,232 in 1943 and 48,098 in 1942.

Solemnization.—A marriage may be solemnized in any place within the Commonwealth by a minister of the gospel who resides in the Commonwealth, or, who if a non-resident is the pastor of a church or denomination duly established in the Commonwealth and who is recognized by his church or denomination as duly ordained and in good and regular standing as a minister of such church or denomination; by a rabbi of the Israelitish faith, duly licensed by a congregation of said faith established in the Commonwealth, who has filed with the clerk or registrar of the city or town where such congregation is established a certificate of the establishment of the synagogue therein, the date of his appointment thereto, and of the term of his engagement; by a justice of the peace if he is also clerk or assistant clerk of a city or town, or a registrar or assistant registrar, in the city or town where he holds such office, or, if he is also clerk or assistant clerk of a court, in the city or town where the court is authorized to be held, or, if he has been designated as a justice of the peace to solemnize marriages in the city or town where he resides; and it may be solemnized among Friends or Quakers according to the usages of their societies;

and a specified marriage may be performed by a non-resident clergyman commissioned by the Governor in accordance with the provisions of General Laws Chap. 207, Sec. 39; but no person shall solemnize a marriage in the Commonwealth unless he can read and write the English language.

When Massachusetts residents go into another state to be married and return to live in this Commonwealth they are required within seven days after their return to file a declaration of their marriage with the clerk of the town where either of them resided at the time of their marriage. A penalty is provided by statute for non-compliance with the law.

Chapter 561 of the Acts of 1943 provides for premarital blood examination. Certificates of medical examinations must be presented by both parties to the intended marriage before the marriage certificate is issued. If the test is positive it does not prevent the marriage but the physician must inform the parties when the result is positive.

Accuracy. — The registration of marriages presents fewer difficulties than the registration of birth and death records and the statistics should be nearly 100 per cent perfect.

Every precaution has been taken to see that the statutes pertaining to the solemnization of marriage are strictly enforced, but as there is no public registration of ministers of the gospel in Massachusetts, it is not always possible to get in touch with the persons responsible for making returns of marriages solemnized by them. To guard against the possibility of marriages being performed on one license where two are required, on an out-of-state license, or on a license that has become invalid because of lapse of time, a circular setting forth the requirements before and after solemnizing a marriage has been prepared, together with a copy of the marriage laws and these are forwarded, upon request, to all persons interested, and are sent to the city and town clerks, together with posters setting forth the legal impediments to marriage, which are required to be posted in their offices.

The errors in solemnizing and returning a record of marriage, if any, are due to the lack of information as to the requirements of the statute rather than to any wilful attempt to evade the requirements of the law.

Marriage licenses issued to residents are valid throughout the Commonwealth, regardless of the residence of either party and many marriages are performed in cities and towns other than the place where either party lived. Persons who do not reside in the Commonwealth must file their intention with the clerk of the city or town where they propose to have the marriage solemnized and the marriage must be solemnized in that particular municipality.

The principal source of error in the records of marriage comes about through the carelessness or ignorance of one of the parties in filing the notice of intention as to the facts concerning the other party. Therefore, it sometimes happens that records for the same marriage coming from different towns do not contain the same information. Names and other facts will be at variance. These certificates are compared in the Division of Vital Statistics and every effort is made to have the certificates agree, but considerable confusion and delay follow from this situation.

Purpose. — The practical purposes of marriage records are:

1. As evidence to establish dower and curtesy rights of husband and wife.
2. To prove legality as to claims of inheritance.
3. As evidence upon which to base subsequent records concerning the parties.
4. For Governmental pension purposes.
5. For pensions under Employees Pension Laws.
6. For insurance, pension and retirement purposes.
7. To establish legal settlement for public aid and the settlement of dependent children of parents.
8. For naturalization and passport purposes.
9. To prove legitimacy of children.

The following tables contain the number of marriages solemnized:

Statistical tables	255-273

INTRODUCTION.

Causes for Divorce. — Causes for which divorce from the bonds of matrimony may be granted in Massachusetts under the provisions of Chapter 208, Sections 1 and 2 of the General Laws, are as follows:—

1. Adultery.
2. Impotency.
3. Desertion for three consecutive years next prior to the filing of the libel.
4. Gross and confirmed habits of intoxication caused by the voluntary and excessive use of intoxicating liquor, opium or other drugs.
5. Cruel and abusive treatment.
6. Neglect to provide.
7. Sentence to imprisonment at hard labor for five years or more.

A marriage may be declared void in consequence of violation of the provisions of the laws concerning marriage; that is, a separation may be granted because of the demonstration of conditions obtaining at the time of, or previous to, the alleged marriage, which show that there never was a legal marriage.

Source of Data. — The statistics of divorce presented in this report are compiled from returns made to the Secretary of the Commonwealth annually by the clerks of courts and registers of probate for the several counties.

In Massachusetts there is no central record office for divorces, the statistics only being returned as stated above. The records remain with the clerks or registers.

Previous to 1922 the superior court only had jurisdiction in such matters. Under the provisions of General Laws, Tercentenary Edition, Chapter 208, the probate court now has concurrent jurisdiction with the superior court to hear libels for divorce and to determine the same in a similar manner.

Applications for Divorce. — The courts granted over 4 petitions out of every 5 filed. This proportion fluctuated considerably during the twenty-five years from 1920 to 1944, the highest proportion of applications being granted in 1940 (90.7 per cent), and the lowest proportion in 1929 (71.1 per cent). During this entire period 86.5 per cent of all applications were granted, .5 per cent were refused, and 13.0 per cent were dismissed.

Contested Cases. — Of the total number of applications for divorces during the twenty-five years from 1920 to 1944, only 25.5 per cent were contested. In 1944, of the 7,171 applications for divorce, only 2,469, or 34.4 per cent, were contested, and of the 6,312 divorces granted, 1,921 or 30.4 per cent, were contested. The proportion of contested cases is larger for divorces granted to the wife (32.2 per cent) than for those granted to the husband (25.4 per cent).

Number of Divorces. — Divorces granted in 1944 numbered 6,312, an increase of 1,168, or 22.7 per cent more than the number granted in 1943, and 1,463 more than the average number granted for the five-year period 1939 to 1943.

Divorce Rates. — The number of divorces granted per 100,000 population was 145.3 as compared with 118.6 in 1943, 125.0 in 1942, 110.1 in 1941 and 104.3 in 1940.

Divorce rates based on the married population, i.e., the number of divorces per 100,000 married population, are more significant than rates based upon the total population, because of the elimination of possible variations in the proportion married, and because of the fact that divorce can arise only among the married. Rates calculated in this manner are shown in Table 65, page 271, for the census years 1915 to 1940. In this table the number of divorces shown for the census years 1915 to 1940 is not the actual number in that year, but the annual average for the five-year period of which the census year is the median. This method eliminates any peculiarities in the census year which may have affected divorce and makes the figures more typical of the period as a whole.

Party to Which Granted. — Three-fourths (75 per cent) of the total number of divorces in the period 1920 to 1944 were granted to the wife. In other words, divorces obtained by the wife are more than twice as numerous as those obtained by the husband. It may be that husbands more often than wives give occasion for divorce but the difference may be partially explained by the fact that without any reference to the question of which party is the more frequently responsible for the marital unhappiness, the wife has more legal grounds for divorce than the husband, because certain well known and comparatively common grounds are more readily applicable against the husband than against the wife. For example, neglect to provide, a common legal cause for divorce on the part of the wife, and cruelty, in so far as it is physical cruelty, are not ordinarily available grounds for a husband, although men are sometimes granted divorces on the ground of cruelty.

Moreover, where each party desires divorce, it is more likely that the wife, more often than the husband will make the application, since a cause for which the wife would be granted a divorce might reflect less favorably upon the parties than would a cause for which the husband might be granted a divorce.

The proportion of divorces granted to the wife fluctuated between 70.9 per cent in 1920, and 78.0 in 1940, as compared with 75 per cent for the entire period of 1920 to 1944.

Divorces Classified by Causes. — The statistics concerning the cause of divorce deal with the legal cause as ascertained from the court records. It should be borne in mind, however, that the cause for which a divorce is granted by the courts is not necessarily the underlying reason for the marital unhappiness, and that the value of statistics of divorce as an index to the actual causes is as a consequence impaired.

Divorces granted on the ground of desertion have nearly doubled in the twenty-five year period 1920 to 1944, while the number of divorces granted for adultery has decreased almost one-half.

The most common ground on which divorce was granted by the courts was cruel and abusive treatment, which accounted for 48.3 per cent of all the divorces granted in the period 1920 to 1944, for 22.7 per cent of all those granted to the husband in this period, and for 56.8 per cent of those granted to the wife.

The number and per cent of divorces granted for all causes, to the husband and to the wife, for the twenty-five year period 1920 to 1944, are shown in Table 66, page 271.

Annulled Cases. — Among the less important classes of cases appears the term "Annulments." In 1,666 cases, or 1.6 per cent of the total number of divorces granted during the period 1920 to 1944, there was some cause shown which may have existed at the time of marriage. These cases form but a small proportion of all cases considered, and do not affect the results to any material degree.

Duration of Marriages. — The average number of years libellants were married at the time of application for divorce has fluctuated between 10.2 years in 1928 and 11.6 years in 1944. The average number of years the libellants were married in 1944 was 11.6.

Of the total libellants in Massachusetts for whom the number of years married was reported in 1944, 51 per cent made application for divorce before they had been married ten years, as compared with 52.4 in 1943, 55.4 in 1942, 55.5 in 1941, 54.1 in 1940 and 55.1 for the twenty-five year period 1920 to 1944.

POPULATION STATISTICS

	PAGE
Introductory	274
Estimated population	274
Statistical tables	275, 276
Estimated population by age and sex	276

Introductory. — All vital statistics are based upon the population. The number of births, marriages, divorces and deaths is expressed in relation to the population, usually as rates giving the number occurring during the calendar year per 1,000 inhabitants or group of inhabitants, such as age groups, sex, nativity, race, marital condition, and occupation groups.

Information regarding population is obtained by a census enumeration, and in Massachusetts these enumerations are made every five years. The statistics for 1944 in this report are based on the Federal census taken as of April 1, 1940.

The population of any community or State is continually changing, in most cases increasing, and for this reason it becomes necessary to make estimates of the population for the periods between the census enumerations upon which to base rates for the various vital events, and especially for the accurate computation and expression of birth, marriage, divorce, and death rates. Such estimates are necessary for all dates except those on which the census enumerations are made, and are in all cases preferable to a repetition of the census returns for a certain year.

For non-census years the statistical tables in this book are based upon the estimated population as determined by the arithmetical method, which assumes a constant amount of increase between the census years.

Estimated Population. — The method of calculating estimates of population for the intercensal years is shown in the following example:

Massachusetts had a population of 4,316,721 at the Federal census of 1940 (April 1), and of 4,249,614 at the Federal census of 1930 (April 1). The increase during the intercensal period (10 years) was 67,107, and the monthly increase according to the arithmetical method of estimating population, was —

$$\frac{4,316,721 - 4,249,614}{10} = 6,710$$

The same annual increase is also assumed to occur until the next census shall have been taken. The population for July 1, 1944, is estimated by adding to the population as it existed at the preceding census (April 1, 1940), 6,710 for each year intervening between the date of enumeration and the date for which the estimate is desired (July 1, 1944). There being $4\frac{1}{4}$ years between these dates, the calculation would be

$$4,316,721 + (4\frac{1}{4} \times 6,710) = 4,345,238.$$

The census population for each municipality in the Commonwealth having over 15,000 inhabitants in 1940 is shown on page 275.

APPENDIX

INTERNATIONAL CLASSIFICATION OF CAUSES OF DEATH

1. DETAILED INTERNATIONAL LIST
2. ABRIDGED INTERNATIONAL LIST

INTERNATIONAL CLASSIFICATION OF CAUSES OF DEATH.

There are two separate and distinct classifications of causes of death embodied in the International List of Causes of Death, these are the detailed and abridged International Lists. The former, as indicated by its name, presents causes of death in greater detail than does the latter; that is, it shows separately certain diseases which in the abridged list are grouped together for presentation. The majority of the titles of the abridged list are therefore consolidations of certain titles of the detailed list. The shorter list is used as a basis for certain tables in this volume for which it is either unnecessary or impracticable to present data for each disease and cause of death shown in the detailed list.

The distinction between these lists should always be considered when using the tables of these reports. There are several cases in which the title headings in the two lists are identical, but the causes included are widely at variance. As an example of this, the title "Other infectious and parasitic diseases" of the detailed list (title No. 44) includes only such epidemic maladies as are not classified separately in titles 1 to 44 of that list; but "Other infectious and parasitic diseases" of the abridged list includes titles 4, 5, 6, 7, 11, 12, 23, 24, 25, 26, 27, 29, 31, 32, 36, 37, 38, 40, 41, 42, 43, and 44 of the detailed list.

An asterisk (*) denotes that, in the opinion of the committee appointed by the Section on Vital Statistics of the American Public Health Association, the titles are acceptable statements of causes of death without autopsy.

The following table shows each title of the Detailed International List:—

1. DETAILED INTERNATIONAL LIST.

- I. INFECTIOUS AND PARASITIC DISEASES.**
1. Typhoid fever.*
 2. Paratyphoid fever.*
 3. Plague.*
 4. Cholera.
 5. Undulant fever (brucellosis).
 6. Cerebrospinal (meningococcus) meningitis.
 7. Anthrax (infection by bacillus anthracis).²
 8. Scarlet fever.*
 9. Whooping cough.*
 10. Diphtheria (infection by *C. diphtheriae*).*
 11. Erysipelas.*
 12. Tetanus.³
 13. Tuberculosis of the respiratory system (including the bronchial and mediastinal lymph nodes).*
- (a) With mention of occupational disease of the lungs.

- I. INFECTIOUS AND PARASITIC DISEASES.—Cont.**
- (b) Without mention of occupational disease of the lungs.
 - (c) Tuberculosis of unspecified site.
 14. Tuberculosis of the meninges and central nervous system.⁴
 15. Tuberculosis of the intestines and peritoneum.⁵
 16. Tuberculosis of the vertebral column.*
 17. Tuberculosis of the bones and joints (except vertebral column).⁶
 - (a) Bones.
 - (b) Joints.
 18. Tuberculosis of the skin and subcutaneous cellular tissue.⁶
 19. Tuberculosis of the lymphatic system (except bronchial, mediastinal, mesenteric, and retroperitoneal lymph nodes).⁶
 20. Tuberculosis of the genito-urinary system.⁶

¹ The second decennial revision of the International Classification of Causes of Death was made at Paris, July 1 to 3, 1909. The next revision was also made at Paris, Oct. 11 to 14, 1920, and was used beginning with 1921. The causes of death as given in the fourth revision number 214, compared with 179 in the first, 189 in the second, and 205 in the third classification. The fifth revision of the International List of Causes of Death is largely a revision of the previous edition and is based upon the translation of the official French version of the proceedings of the International Commission of 1938.

² Not a reliable statement of cause of death, without autopsy, or without determination of the etiological factor; i.e., the *bacillus anthracis*.

³ A reliable statement of cause of death, without autopsy, when it is accompanied by information as to date, site, nature, and means of injury.

⁴ A reliable statement of cause of death, without autopsy, for children under 10 years of age, but not for decedents of older groups, unless there is confirmatory bacteriological proof of the presence of the tubercle bacillus in the spinal fluid.

⁵ An unreliable statement of cause of death, without autopsy, unless proof of an abdominal operation or recovery of tubercle bacillus from the abdominal fluid is presented.

⁶ Statements of cause of death which relate to organs or parts of the body which are accessible to direct vision are reliable without autopsy.

DETAILED INTERNATIONAL LIST — *Continued.*

I. INFECTIOUS AND PARASITIC DISEASES.

—*Cont.*

21. Tuberculosis of other organs.¹
 - (a) Tuberculosis of the adrenal glands.
 - (b) Tuberculosis of other organs.
22. Disseminated tuberculosis.*
 - (a) Acute (generalized) miliary tuberculosis.
 - (b) Other and unspecified generalized tuberculosis.
23. Leprosy.*
24. Septicemia and purulent infection (non-puerperal).
 - (a) Septicemia.
 - (b) Pyemia.
 - (c) Gas bacillus gangrene.
 - (d) Generalized bacillus coli infection.
25. Gonococcus infection.²
26. Other diseases due to bacteria (except dysentery).
 - (a) Tularemia.
 - (b) Other diseases due to bacteria.
27. Dysentery.³
 - (a) Bacillary.
 - (b) Amebic.
 - (c) Other and unspecified forms of dysentery.
28. Malaria.⁴
 - (a) Benign tertian malaria.
 - (b) Quartan malaria.
 - (c) Malignant tertian (estivoautumnal) malaria.
 - (d) Malaria (unspecified form).
29. Other diseases due to parasitic protozoa (except spirochetes).
30. Syphilis.⁵
 - (a) Locomotor ataxia (tabes dorsalis).*
 - (b) General paralysis of the insane.*
 - (c) Other syphilis of the central nervous system.
 - (d) Aneurysm of the aorta.
 - (e) Other syphilis of the circulatory system.
 - (f) Congenital syphilis.
 - (g) Other and unspecified forms of syphilis.
31. Relapsing fever.⁶
32. Other diseases due to spirochetes.
 - (a) Spirochetosis interohaemorrhagica (Weil's disease).
 - (b) Other diseases due to spirochetes.
33. Influenza (grippe).
 - (a) With respiratory complications specified.
 - (b) Without respiratory complications specified.
34. Smallpox.*
35. Measles.*
36. Acute poliomyelitis and acute polioencephalitis.*
37. Acute infectious encephalitis (lethargic).
 - (a) Acute infectious encephalitis (lethargic).
 - (b) Sequelae of encephalitis lethargica.
 - (c) Encephalitis lethargica unqualified.
 - (d) Equine encephalomyelitis.

I. INFECTIOUS AND PARASITIC DISEASES.

—*Cont.*

38. Other diseases due to filtrable viruses.
 - (a) Yellow fever.*
 - (b) Rabies.⁷
 - (c) Herpes zoster.*
 - (d) German measles.
 - (e) Chickenpox.
 - (f) Other diseases ascribed to viruses.
 39. Typhus fever and typhus-like diseases (due to Rickettsia).⁸
 - (a) Exanthematic typhus (epidemic form).
 - (b) Endemic typhus fever.
 - (c) Rocky Mountain spotted fever.
 - (d) Other typhus-like diseases.
 40. Ankylostomiasis.⁹
 41. Hydatid disease.
 42. Other diseases caused by helminths.⁹
 43. Mycoses.¹⁰
 44. Other infectious and parasitic (communicable) diseases.
 - (a) Venereal diseases (except gonorrhea and syphilis).
 - (b) Lymphogranulomatosis (Hodgkin's disease).
 - (c) Mumps.
 - (d) Other infectious and parasitic (communicable) diseases.
- II. CANCERS AND OTHER TUMORS.
45. Cancer of the buccal cavity and pharynx.*
 - (a) Lip.
 - (b) Tongue.
 - (c) Mouth.
 - (d) Jaw bone.
 - (e) Unspecified parts of the buccal cavity.
 - (f) Pharynx.
 46. Cancer of the digestive organs and peritoneum.¹¹
 - (a) Esophagus.
 - (b) Stomach.
 - (c) Duodenum.
 - (d) Rectum and anus.
 - (e) Intestines (except duodenum and rectum).
 - (f) Liver and biliary passages.
 - (g) Pancreas.
 - (h) Mesentery and peritoneum.
 - (m) Other and unspecified sites.
 47. Cancer of the respiratory system.¹¹
 - (a) Larynx.
 - (b) Trachea.
 - (c) Bronchus.
 - (d) Lung.
 - (e) Pleura.
 - (f) Mediastinum and unspecified sites.
 48. Cancer of the uterus.¹¹
 - (a) Cervix.
 - (b) Other and unspecified sites.
 49. Cancer of other female genital organs.¹¹
 - (a) Ovary.
 - (b) Fallopian tube and parametrium.
 - (c) Vagina.
 - (d) Vulva.
 - (e) Other and unspecified sites.

¹ Statements of cause of death which relate to organs or parts of the body which are accessible to direct vision are reliable without autopsy.

² An unreliable statement of cause of death, without autopsy, unless a gonococcal lesion has been demonstrated by the recovery of the gonococcus from the site of the lesion, or by a specific serum reaction, and unless the lesion was an adequate cause of death.

³ Not a reliable statement of cause of death unless the specific cause of infection has been identified.

⁴ Not a reliable statement of cause of death without the supporting statement that the etiological factor, the *Plasmodium malariae* was found in the blood before death or at autopsy.

⁵ Not reliable as a statement of cause of death, without autopsy, unless diagnosis was based on lesions superficially situated or visible through body orifices, or confirmed by unquestioned specific test. A statement of the site, extent, and character of the lesion should be given.

⁶ This statement is a reliable one, without autopsy, only when the statement of the cause of death is accompanied or supported by a record of the finding of the etiological factor, that is, the *Spirillum (Spirochaeta) obermeieri*, before death.

⁷ Not a reliable statement of cause of death unless verified by autopsy, or proof that the infecting bite was by a proved rabid animal.

⁸ A reliable statement of cause of death, without autopsy, provided the infectious parasite *ankylostoma duodenale* or its ova have been demonstrated.

⁹ A reliable statement of cause of death, without autopsy, only with the demonstration of the parasite or its ova in the tissues or discharges.

¹⁰ A reliable statement of cause of death, without autopsy, only when lesion is accessible in direct examination, or the etiological factor has been identified in the discharges before death.

¹¹ An unreliable statement of cause of death, without autopsy, unless an operation was performed or the neoplasm was otherwise visible or accessible for direct observation.

DETAILED INTERNATIONAL LIST — *Continued.*II. CANCERS AND OTHER TUMORS.—*Cont.*

50. Cancer of the breast.*
51. Cancer of the male genital organs.¹
 - (a) Scrotum.
 - (b) Prostate.
 - (c) Testes.
 - (d) Penis.
 - (e) Other and unspecified sites.
52. Cancer of the urinary organs (male and female).¹
 - (a) Kidney.
 - (b) Bladder.
 - (c) Other and unspecified sites.
53. Cancer of the skin (except vulva and scrotum).*
54. Cancer of the brain and other parts of the central nervous system (including glioma, except when specified as benign).¹
 - (a) Glioma.
 - (b) Other and unspecified cancers of the brain and central nervous system.
55. Cancer of other and unspecified organs.¹
 - (a) Adrenal gland.
 - (b) Bone (except jaw bone and accessory sinuses).
 - (c) Thyroid gland.
 - (d) Nasal cavity and accessory sinuses.
 - (e) Other and unspecified organs.
56. Nonmalignant tumors (including dermoid cysts).¹
 - (a) Ovary.
 - (b) Uterus.
 - (c) Other female genital organs.
 - (d) Brain and other parts of the central nervous system.
 - (e) Other and unspecified organs.
57. Tumors of unspecified nature.*¹
 - (a) Ovary.
 - (b) Uterus.
 - (c) Other female genital organs.
 - (d) Brain and other parts of the central nervous system.
 - (e) Other and unspecified organs.

III. RHEUMATISM, DISEASES OF NUTRITION AND OF THE ENDOCRINE GLANDS, OTHER GENERAL DISEASES, AND AVITAMINOSES.

58. Acute rheumatic fever.*
 - (a) Acute rheumatic pericarditis.
 - (b) Acute rheumatic endocarditis.
 - (c) Acute rheumatic myocarditis.
 - (d) Other acute rheumatic heart diseases.
 - (e) Other forms of acute rheumatic fever.
 - (f) Rheumatism (not specified as acute or chronic).
59. Chronic rheumatism and other rheumatic diseases.
 - (a) Rheumatoid arthritis.
 - (b) Other chronic articular rheumatism.
 - (c) Other and unspecified forms of chronic rheumatism.
60. Gout.
61. Diabetes mellitus.*
62. Diseases of the pituitary gland.
63. Diseases of the thyroid and parathyroid glands.
 - (a) Simple goiter.
 - (b) Exophthalmic goiter.
 - (c) Myxedema and cretinism.
 - (d) Other diseases of the thyroid glands.
 - (e) Diseases of the parathyroid glands.
64. Diseases of the thymus gland.

III. RHEUMATISM, DISEASES OF NUTRITION AND OF THE ENDOCRINE GLANDS, OTHER GENERAL DISEASES, AND AVITAMINOSES.—*Cont.*

65. Diseases of the adrenal glands (not specified as tuberculous).*
 - (a) Addison's disease (not specified as tuberculous).
 - (b) Other diseases of the adrenal glands.
66. Other general diseases.
 - (a) Osteomalacia.
 - (b) Other general diseases.
67. Scurvy.*
68. Beriberi.*
69. Pellagra (except alcoholic).*
70. Rickets.*
71. Other avitaminoses.

IV. DISEASES OF THE BLOOD AND BLOOD-FORMING ORGANS.

72. Hemorrhagic conditions.
 - (a) Primary purpuras.
 - (b) Hemophilia.
 - (c) Other hemorrhagic conditions.
73. Anemias (except splenic anemia).²
 - (a) Pernicious anemia.
 - (b) Other hyperchromic anemias.
 - (c) Hypochromic anemias.
 - (d) Other and unspecified anemias.
74. Leukemias and aleukemias.³
 - (a) Leukemias.
 - (b) Aleukemias.
75. Diseases of the spleen.
 - (a) Splenic anemia.
 - (b) Splenomegaly (of undetermined nature).
 - (c) Other diseases of the spleen.
76. Other diseases of the blood and blood-forming organs.
 - (a) Agranulocytosis.
 - (b) Erythrocytosis.
 - (c) Hemoglobinemia.
 - (d) Other diseases of the blood and blood-forming organs.

V. CHRONIC POISONING AND INTOXICATION.

77. Alcoholism (ethylism).*
 - (a) Alcoholic pellagra.
 - (b) Other deficiency states associated with alcoholism.
 - (c) Acute alcoholism.
 - (d) Chronic alcoholism.
 - (e) Other and unspecified alcoholism.
78. Lead poisoning.⁴
 - (a) Specified as occupational.
 - (b) Not specified as occupational.
79. Chronic poisoning by other mineral or organic substances.⁵
 - (a) Specified as occupational.⁶
 - (b) Not specified as occupational.

VI. DISEASES OF THE NERVOUS SYSTEM AND SENSE ORGANS.

80. Encephalitis (nonepidemic).
 - (a) Intracranial abscess.
 - (b) Other encephalitis (nonepidemic).
81. Meningitis (not due to meningococcus).
 - (a) Simple meningitis.
 - (b) Acute cerebrospinal meningitis (not due to meningococcus).
 - (c) Pneumococcus meningitis.
82. Diseases of the spinal cord (except locomotor ataxia and disseminated sclerosis).

¹ An unreliable statement of cause of death, without autopsy, unless an operation was performed or the neoplasm was otherwise visible or accessible for direct observation.

² An unreliable statement of cause of death, without autopsy, unless an operation was performed.

³ Not a reliable statement of cause of death unless verified by confirmatory blood examination.

⁴ A reliable statement of cause of death, without autopsy, if there appears a statement of an occupation in which decedent would be subject to lead poisoning, or if the source of the poisoning is specified and complications accompanying, sufficient to cause death, are described.

⁵ A reliable statement of cause of death, without autopsy, only when the source of the poison is specified, or when there is chemical or microscopic proof of the presence of the poison within the body.

⁶ A reliable statement of cause of death, without autopsy, only in cases where the occupation or source of poison is specified and it is indicated that the poison was absorbed as a result of occupation; or the characteristic lesions are superficially located or accessible to direct inspection; or there is chemical or microscopic proof of the presence of poison within the body.

DETAILED INTERNATIONAL LIST — *Continued.*VI. DISEASES OF THE NERVOUS SYSTEM AND
SENSE ORGANS.—*Cont.*

83. Intracranial lesions of vascular origin.
 - (a) Cerebral hemorrhage or effusion (excluding birth injuries).
 - (b) Cerebral embolism and thrombosis.
 - (c) Cerebral softening.
 - (d) Hemiplegia and other paralysis of unspecified origin.
84. Mental diseases and deficiency (except general paralysis of the insane).
 - (a) Mental deficiency.
 - (b) Schizophrenia (dementia praecox).
 - (c) Manic-depressive psychosis.
 - (d) Other mental diseases.
85. Epilepsy.¹
86. Convulsions (under 5 years of age).
87. Other diseases of the nervous system.*
 - (a) Chorea.
 - (b) Neuritis (except rheumatic and alcoholic).
 - (c) Paralysis agitans (except result of encephalitis).
 - (d) Disseminated sclerosis.
 - (e) Other diseases of the nervous system.
88. Diseases of the organs of vision.*
89. Diseases of the ear and mastoid process.*
 - (a) Otitis and other diseases of the ear.
 - (b) Diseases of the mastoid process.

VII. DISEASES OF THE CIRCULATORY SYSTEM.

90. Pericarditis (except acute rheumatic).²
 - (a) Chronic rheumatic pericarditis.
 - (b) Other pericarditis.
91. Acute endocarditis (except rheumatic).*
 - (a) Bacterial endocarditis (acute, subacute, or unspecified).
 - (b) Other acute or subacute endocarditis.
 - (c) Endocarditis (not specified as acute, chronic, or rheumatic, under 45 years of age).
92. Chronic affections of the valves and endocardium.*
 - (a) Diseases of the aortic valve (without mention of diseases of the mitral valve or rheumatic fever).
 - (b) Diseases of the mitral valve (whether or not specified as rheumatic).
 - (c) Diseases of other and unspecified valves and chronic endocarditis, specified as rheumatic.
 - (d) Diseases of other and unspecified valves and chronic endocarditis, not specified as rheumatic.
 - (e) Endocarditis (not specified as acute, chronic, or rheumatic, 45 years of age and over).
93. Diseases of the myocardium.*
 - (a) Acute myocarditis (except rheumatic).
 - (b) Myocarditis (not specified as acute, chronic, or rheumatic, under 45 years of age).
 - (c) Chronic myocarditis and myocardial degeneration, specified as rheumatic.
 - (d) Chronic myocarditis and myocardial degeneration, not specified as rheumatic.
 - (e) Other myocarditis (not specified as acute, chronic, or rheumatic).
94. Diseases of the coronary arteries and angina pectoris.*
 - (a) Diseases of the coronary arteries.
 - (b) Angina pectoris.
95. Other diseases of the heart.*
 - (a) Functional diseases of the heart (without mention of organic lesion).
 - (b) Other diseases of the heart, specified as rheumatic.

VIII. DISEASES OF THE CIRCULATORY SYSTEM.
—*Cont.*

- (c) Other diseases of the heart, not specified as rheumatic.
 96. Aneurysm (except of heart and aorta).
 97. Arteriosclerosis (except coronary or renal sclerosis).
 98. Gangrene.
 99. Other diseases of the arteries.*
 100. Diseases of the veins.³
 - (a) Varices.
 - (b) Other diseases of the veins.
 101. Diseases of the lymphatic system.*
 102. High blood pressure (idiopathic).
 103. Other diseases of the circulatory system.*
-
- VIII. DISEASES OF THE RESPIRATORY SYSTEM.
 104. Diseases of the nasal fossae and accessory sinuses.*
 - (a) Diseases of the nasal fossae.
 - (b) Diseases of the accessory sinuses.
 105. Diseases of the larynx.*
 106. Bronchitis.
 - (a) Acute.
 - (b) Chronic.*
 - (c) Unspecified.
 107. Bronchopneumonia (including capillary bronchitis).*
 108. Lobar pneumonia.
 109. Pneumonia unspecified.
 110. Pleurisy (not specified as tuberculous).*
 - (a) Empyema.
 - (b) Other and unspecified forms of pleurisy.
 111. Hemorrhagic infarction, thrombosis, edema, and chronic congestion of the lungs.⁴
 - (a) Hemorrhagic infarction and thrombosis of the lungs.
 - (b) Acute edema of the lungs.
 - (c) Chronic and unspecified congestion of the lungs.
 112. Asthma.
 113. Pulmonary emphysema.*
 114. Other diseases of the respiratory system (except tuberculosis).*
 - (a) Silicosis.
 - (b) Other and unspecified forms of pneumoconioses.
 - (c) Gangrene of lung.
 - (d) Abscess of lung.
 - (e) Other and unspecified diseases of the respiratory system.

IX. DISEASES OF THE DIGESTIVE SYSTEM.

115. Diseases of the buccal cavity, pharynx, tonsils and adnexa.*
 - (a) Diseases of the teeth and gums.
 - (b) Septic sore throat.
 - (c) Diseases of the pharynx and tonsils.
 - (d) Diseases of other and unspecified parts of the buccal cavity and adnexa.
116. Diseases of the esophagus.*
117. Ulcer of stomach or duodenum.
 - (a) Stomach.
 - (b) Duodenum.
118. Other diseases of the stomach (except cancer).
119. Diarrhea, enteritis, and ulceration of the intestines (under 2 years of age).*
 - (a) Diarrhea and enteritis.
 - (b) Ulceration of the intestines (except duodenum).
120. Diarrhea, enteritis, and ulceration of the intestines (2 years of age and over).
 - (a) Diarrhea and enteritis.
 - (b) Ulceration of the intestines (except duodenum).
121. Appendicitis.

¹ An unreliable statement of cause of death, without autopsy, unless death occurred in an epileptic attack and was witnessed, and there was a previous history of epilepsy.

² An unreliable statement of cause of death, without autopsy, unless accompanied by a statement of primary cause or of the character of exudate obtained by paracentesis.

³ A reliable statement of cause of death, without autopsy, if there is an accompanying statement of the site of the lesion or name of the vessel or vessels involved.

⁴ Pulmonary congestion is considered a reliable statement of cause of death, without autopsy, only when the cause is specified; as, for example, *accidental inhalation of irritating fumes*, or accompanying lesions which are known to lead to congestion of the lungs.

DETAILED INTERNATIONAL LIST — *Continued.*IX. DISEASES OF THE DIGESTIVE SYSTEM.—*Cont.*

122. Hernia, intestinal obstruction.
 - (a) Hernia.¹
 - (b) Intestinal obstruction.²
123. Other diseases of the intestines.
124. Cirrhosis of the liver.*
 - (a) With mention of alcoholism.
 - (b) Without mention of alcoholism.
125. Other diseases of the liver.*
 - (a) Acute yellow atrophy of the liver (non-puerperal).
 - (b) Other diseases of the liver.
126. Biliary calculi.*
127. Other diseases of the gallbladder and biliary ducts.
 - (a) Cholecystitis (without mention of biliary calculus).
 - (b) Other diseases of the gallbladder and biliary ducts.
128. Diseases of the pancreas (except diabetes mellitus).
129. Peritonitis (cause not stated).

X. DISEASES OF THE GENITOURINARY SYSTEM.

130. Acute nephritis.
131. Chronic nephritis.*
 - (a) Arteriosclerotic kidney.
 - (b) Other chronic nephritis.
132. Nephritis unspecified (10 years of age and over).*
133. Other diseases of the kidneys and ureters (except diseases associated with pregnancy, childbirth, or puerperium).
 - (a) Pyelitis, pyelonephritis, and pyelocystitis.
 - (b) Other diseases of the kidneys and ureters.
134. Calculi of the urinary passages.*
 - (a) Kidneys and ureters.
 - (b) Bladder.
 - (c) Other and unspecified parts of the urinary passages.
135. Diseases of the urinary bladder.*
 - (a) Cystitis.
 - (b) Other diseases of the bladder.
136. Diseases of the urethra (except calculus).*
 - (a) Stricture of the urethra.
 - (b) Others under this title.
137. Diseases of the prostate.*
 - (a) Hypertrophy of the prostate.
 - (b) Other diseases of the prostate.
138. Diseases of other male genital organs (not specified as venereal).*
139. Diseases of the female genital organs.*
 - (a) Ovaries, fallopian tubes, and parametria.
 - (b) Uterus¹
 - (c) Other and unspecified female genital organs.

XI. DISEASES OF PREGNANCY, CHILDBIRTH, AND THE PUERPERIUM.

140. Abortion with mention of infection.*

Abortion (spontaneous, therapeutic, or of unspecified origin):

 - (a) With mention of pyelitis.
 - (b) With mention of other infection.

Abortion (induced for reasons other than therapeutic):

 - (c) Self-induced abortion with mention of infection.
 - (d) Abortion induced for nontherapeutic reasons by persons other than the woman herself with mention of infection.
141. Abortion without mention of infection.*

Abortion (spontaneous, therapeutic, or of unspecified origin):

 - (a) With mention of hemorrhage, trauma or shock, and toxemia.
 - (b) With mention of hemorrhage, trauma or shock (but not toxemia).

XI. DISEASES OF PREGNANCY, CHILDBIRTH, AND THE PUERPERIUM.—*Cont.*

- (c) With mention of toxemia (but not hemorrhage, trauma or shock).
 - (d) Without mention of hemorrhage, trauma or shock, or toxemia.
- Abortion (induced for reasons other than therapeutic):
- (e) Self-induced abortion.
 - (f) Abortion induced for nontherapeutic reasons by persons other than the woman herself.
142. Ectopic gestation.*
 - (a) With mention of infection.
 - (b) Without mention of infection.
143. Hemorrhage of pregnancy (death before delivery).*
 - (a) Placenta previa.
 - (b) Premature separation of placenta.
 - (c) Other and unspecified hemorrhage of pregnancy.
144. Toxemias of pregnancy (death before delivery).*
 - (a) Eclampsia of pregnancy.
 - (b) Albuminuria and nephritis of pregnancy.
 - (c) Acute yellow atrophy of liver (during pregnancy).
 - (d) Other toxemias of pregnancy.
145. Other diseases and accidents of pregnancy (death before delivery).*
 - (a) Infection of pregnancy.
 - (b) Other accidents of pregnancy.
146. Hemorrhage of childbirth and puerperium.*
 - (a) Placenta previa (with childbirth).
 - (b) Premature separation of placenta (with childbirth).
 - (c) Other and unspecified hemorrhages of childbirth and puerperium.
147. Infection during childbirth and puerperium.*
 - (a) Puerperal pyelitis and pyelonephritis.
 - (b) General or local puerperal infection (except pyelitis).
 - (c) Puerperal thrombophlebitis.
 - (d) Puerperal embolism and sudden death.
148. Puerperal toxemias (excluding death before delivery).*
 - (a) Puerperal eclampsia.
 - (b) Puerperal albuminuria and nephritis.
 - (c) Acute yellow atrophy of the liver (puerperal).
 - (d) Other puerperal toxemias.
149. Other accidents and specified conditions of childbirth.*
 - (a) Laceration, rupture, or other trauma of pelvic organs and tissue.
 - (b) Other specified conditions of childbirth.
150. Other and unspecified conditions of childbirth and the puerperium.*
 - (a) Infection of breast during lactation.
 - (b) Psychosis of puerperium.
 - (c) Other and unspecified conditions of childbirth and the puerperium.

XII. DISEASES OF THE SKIN AND CELLULAR TISSUE.

151. Carbuncle, furuncle.³
152. Phlegmon, acute abscess.³
153. Other diseases of the skin and cellular tissue.*

XIII. DISEASES OF THE BONES AND ORGANS OF MOVEMENT.

154. Osteomyelitis and periostitis.*
 - (a) Acute.
 - (b) Chronic or unspecified.
155. Other diseases of the bones (except tuberculosis).*
156. Diseases of the joints and other organs of movement.*
 - (a) Diseases of the joints (except tuberculosis and rheumatism).
 - (b) Diseases of other and unspecified organs of movement.

¹ A reliable statement of cause of death if the hernia is external, or is exposed on operation or autopsy, when internal; also, when conditions adequate to cause of death, together with type and location of hernia, are specified.

² An unreliable statement of cause of death unless the obstruction is demonstrated on autopsy or operation, or is accessible by examination through the body orifices.

³ A reliable statement of cause of death, without autopsy, if there is an accompanying statement of the site and nature of the original infection.

DETAILED INTERNATIONAL LIST — *Continued.*

XIV. CONGENITAL MALFORMATIONS.

157. Congenital malformations (stillbirths not included).*
- Congenital malformations of the central nervous system:
- (a) Congenital hydrocephalus.
 - (b) Spina bifida and meningocele.
 - (c) Anencephalus.
 - (d) Other congenital malformations of the central nervous system.
- Congenital malformations of the cardiovascular system:
- (e) Congenital malformations of the heart.
 - (f) Other congenital malformations of the cardiovascular system.
- Other congenital malformations:
- (g) Congenital malformations of the digestive system.
 - (h) Congenital malformations of the genitourinary system.
 - (m) Other and unspecified congenital malformations.

XV. DISEASES PECULIAR TO THE FIRST YEAR OF LIFE.

158. Congenital debility (cause not stated).
159. Premature birth (cause not stated).*
160. Injury at birth.*
- (a) Intracranial or spinal hemorrhage.
 - (b) Other intracranial or spinal injuries.
 - (c) Other injuries at birth.
161. Other diseases peculiar to the first year of life.
- (a) Asphyxia (cause not specified), atelectasis.
 - (b) Infection of the umbilicus; pemphigus and other infections (nonsyphilitic).
 - (c) Other specified diseases peculiar to the first year of life.

XVI. SENILITY.

162. Senility.
- (a) Senility with mention of senile dementia.
 - (b) Senility without mention of senile dementia.

XVII. VIOLENT OR ACCIDENTAL DEATHS.

163. Suicide by solid or liquid poisons or by poisonous gases.¹
- (a) Arsenic and compounds.
 - (b) Barbituric acid and derivatives.
 - (c) Cresol compounds.
 - (d) Mercury and compounds.
 - (e) Nux vomica and strychnine.
 - (f) Carbolic acid and phenol.
 - (g) Other solid or liquid poisons.
 - (h) Illuminating gas.
 - (m) Motor-vehicle exhaust gas.
 - (o) Other carbon monoxide gas.
 - (x) Other poisonous gases.
164. Suicide by other means.
- (a) Suicide by hanging or strangulation.*
 - (b) Suicide by drowning.*
 - (c) Suicide by firearms and explosives.*
 - (d) Suicide by cutting or piercing instruments.*
 - (e) Suicide by jumping from high places.*
 - (f) Suicide by crushing.*
 - (g) Suicide by other or unspecified means.*
165. Infanticide (homicide of infants under 1 year of age).*
166. Homicide by firearms.*
167. Homicide by cutting or piercing instruments.*
168. Homicide by other means.*
169. Railway accidents (except collisions with motor vehicles).*
170. Motor-vehicle accidents.*
- (a) Collisions between automobiles and trains.*
 - (b) Collisions between automobiles and streetcars.*
 - (c) Automobile accidents (except collisions with trains or streetcars).*
 - (d) Motorcycle accidents (except collisions with automobiles).*

XVII. VIOLENT OR ACCIDENTAL DEATHS.

—*Cont.*

171. Streetcar and other road-transport accidents.*
- (a) Streetcar accidents (except collisions with trains or motor vehicles).
 - (b) Other and unspecified road-transport accidents.
172. Water-transport accidents.*
- (a) Drowning.
 - (b) Other water-transport accidents.
173. Air-transport accidents.*
174. Accidents in mines and quarries.*
175. Agricultural and forestry accidents.*
- (a) Accidents involving agricultural machinery and vehicles.
 - (b) Injury by animals in agriculture.
 - (c) Other agricultural accidents.
 - (d) Accidents involving forestry machinery and vehicles.
 - (e) Other forestry accidents.
176. Other accidents involving machinery.*
177. Food poisoning.²
178. Accidental absorption of poisonous gas.
- (a) Illuminating gas.
 - (b) Motor-vehicle exhaust gas.
 - (c) Other carbon monoxide gas.
 - (x) Other poisonous gases.
179. Acute accidental poisoning by solids or liquids.
- (a) Arsenic and compounds.
 - (b) Barbituric acid and derivatives.
 - (c) Cresol compounds.
 - (d) Mercury and compounds.
 - (e) Nux vomica and strychnine.
 - (f) Carbolic acid and phenol.
 - (g) Lye and potash.
 - (h) Tobacco and derivatives.
 - (m) Narcotics.
 - (o) Methanol and other alcohols.
 - (x) Other and unspecified substances.
180. Conflagration.*
181. Accidental burns (except due to conflagration).*
182. Accidental mechanical suffocation.*
183. Accidental drowning.*
184. Accidental injury by firearms.
185. Accidental injury by cutting or piercing instruments.³
186. Accidental injury by fall or crushing.*
- (a) Fall.
 - (b) Crushing.
187. Cataclysm (all deaths attributed to a cataclysm regardless of their nature).
188. Injury by animals (not specified as venomous or occurring in the course of agricultural and forestry operations).*
189. Hunger or thirst.*
190. Excessive cold.*
191. Excessive heat.*
192. Lightning.*
193. Accidents due to electric currents (except lightning).
194. Poisoning by venomous animals (not specified as occurring in the course of agricultural and forestry operations).*
195. Other accidents.
- (a) Sequelae of preventive immunization, inoculation, or vaccination.
 - (b) Other accidents due to medical or surgical intervention.
 - (c) Lack of care of the new-born.
 - (d) Obstruction, suffocation, or puncture by ingested objects.
 - (e) Other and unspecified accidents.
196. Deaths of military personnel during operations of war.
197. Deaths of civilians due to operations of war.
198. Legal executions.*

XVIII. ILL-DEFINED AND UNKNOWN CAUSES.

199. Sudden death.
200. Ill-defined or unknown causes.
- (a) Ill-defined.
 - (b) Found dead (cause unknown).
 - (c) Unknown or unspecified cause.

¹ A reliable statement of cause of death, without autopsy, if the character of the solid, liquid or gas is specified.

² An unreliable statement of cause of death without supporting data as to a group of accompanying cases or the ingestion of the particular poisonous substances.

³ An unreliable statement of cause of death without supporting data, such as site and extent of injury.

2. ABRIDGED INTERNATIONAL LIST.

The following table shows each title of the Abridged International List. The numbers of the titles of the Detailed International List included in each title of the abridged list appear in parentheses.

Abridged
Int. list
Number.

CAUSE OF DEATH.

1. Typhoid and paratyphoid fevers (1, 2).*
2. Plague (3).*
3. Scarlet fever (8).*
4. Whooping cough (9).*
5. Diphtheria (10).*
6. Tuberculosis of the respiratory system (13).*
7. All other forms of tuberculosis (14, 15, 16, 17, 18, 19, 20, 21, 22).
8. Malaria (28).
9. Syphilis (30).
10. Influenza (33).
11. Smallpox (34).*
12. Measles (35).*
13. Typhus fever (39).*
14. Other infectious or parasitic diseases (4, 5, 6, 7, 11, 12, 23, 24, 25, 26, 27, 29, 31, 32, 36, 37, 38, 40, 41, 42, 43, 44).
15. Cancer and other malignant tumors (45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55).
16. Non-malignant tumors or tumors of unspecified nature (56, 57).*
17. Chronic rheumatism and gout (59, 60).
18. Diabetes mellitus (61).
19. Chronic or acute alcoholism (77).
20. Avitaminosis, other general diseases, diseases of the blood, and chronic poisonings (58, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 78, 79).
21. Meningitis (nonmeningococcal) and diseases of the spinal cord (81, 82).
22. Intracranial lesions of vascular origin (83).
23. Other diseases of the nervous system and sense organs (80, 84, 85, 86, 87, 88, 89).
24. Diseases of the heart (90, 91, 92, 93, 94, 95).*
25. Other diseases of the circulatory system (96, 97, 98, 99, 100, 101, 102, 103).
26. Bronchitis (106).
27. Pneumonia and bronchopneumonia (107, 108, 109).
28. Other diseases of the respiratory system (104, 105, 110, 111, 112, 113, 114).
29. Diarrhea and enteritis (119, 120).
